

MEDOCS

(AN EI BASED HEALTH CARE TECHNOLOGY)

ABSTRACT:

The current problem faced by the medical society is that too many patients are died without proper health care. As the doctors are unable look all patients because of time complexity.

MEDOCS is an Emotional Intelligence technology. That comes with MEDOT (the gadget by MEDOCS) and user defined software. That uses the Emotional intelligence to detect the problems of the user by the MEDOT and provides the requirements of that problem like medicine suggestion, calling a doctor, symptoms etc. As this gets increased the youth doctors communication made much easier. So that the entire patient can be easily looked up. And moreover the youth empowerment are increased through MEDOX as the MEDOX suggestion cell is linked with trainee doctors.

In society the MEDOCS will be great impact to the people as it is giving the importance to the human health condition. The current society has many gadgets to track the daily activities of the people like walk, run, and swim. Etc... But MEDOT works with EMOTIONAL INTELLIGENCE technology. Where it has totally different recognition system. As the tracking status is stored in server of the medocs. The medical report is getting ready for the future uses.
